

Mended Hearts

About Mended Hearts

Mended Hearts is a national non-profit organization made up of and serving people with heart disease and their loved ones. Mended Hearts welcomes anyone who is interested in learning more about heart disease.

Supported by a national office, 280 local chapters actively serve across the United States and Canada. The network is made up of patients having had heart events, family members, caregivers and health care professionals who provide information and support to recovering patients and their families during hospital visits, by telephone, through group meetings and via the Internet. Mended Hearts Chapter 9 will be excited to see all of you at our upcoming meetings. Both patients and caregivers, and interested parties are welcome to attend, FREE, with no commitment to join our organization. We have interesting speakers and refreshments.

PRESIDENT'S MESSAGE

**To the Members, Caregivers, and Friends of Mended Hearts, Chapter 9
Greater Hartford, Connecticut**

Fall Greetings to Members and Friends of Chapter 9:

This year it's more important than ever to get your flu shot. In a normal flu season, heart patients are at a greater risk of developing serious complications from the flu. This year, with COVID-19 putting people with underlying health conditions at risk, heart patients and caregivers of those with congenital heart defects (CHDs), need to be even more vigilant when it comes to protecting their health and the health of their loved ones." The time to get your flu shot is now!

(Taken from the October 2020 Mended Hearts National Newsletter)

Heartfully,

John Dunn, President Mended Hearts, Chapter 9 Greater Hartford, Connecticut

"It's Great To Be Alive, And To Help Others"!

*Special Note: This is the last edition of our 2020 Newsletters. We do not publish in December
Also, the November 18th meeting by Zoom is our last Chapter Meeting this year.
Wishing everyone a Healthy, Safe and Happy New Year! -----John*

Retired and Still Rocking

Retired and still rocking? In the 1950s, guidance counselors recommended that students throw away their rock albums. They probably didn't do it.

Research suggests that seniors are still rocking to the bands of their youth. Seniors have lived through explosive musical changes. Influenced by the crooners of the 1940s and 1950s, to the bluesy rock of Elvis Presley and into the rock band era of the 1960s and 1970s.

One of the main reasons these huge musical movements exist is technology. Radio brought music to the masses. Vinyl records allowed us to choose. Cassette tapes and CDs were portable. And, finally, internet-based music allows consumers to transport, choose, and mix it up.

Some studies say musical tastes change with age. A 2013 University of Cambridge study of data from 250,000 people over 10 years shows that musical tastes shift in line with life challenges.

Adolescents like intense, aggressive, loud, distorted and rebellious music as they struggle to find an identity and overcome frustrations. Young adults prefer romantic, positive and danceable music as they search for love. In this stage, music is part of the search for intimacy, according to Science Daily. By middle age and later, people search for relaxing, emotive, and more sophisticated (or complex) music.

On the other hand, smaller studies by online music companies found that people reached their peak music experiences around age 24 and stopped experimenting with music around age 30. That means seniors may still be rocking out to the bands and voices of their youth. According to a 2001 study by National Institutes of Health, listening to your favorite songs can give your brain a big dose of pleasure.

Virtual screening for Pulmonary Hypertension May Help Save Lives

As telemedicine continues to explode as a result of the COVID-19 pandemic, Temple University physicians have developed a new tool to virtually screen for pulmonary hypertension, according to the Temple University Lewis Katz School of Medicine.

The screening method uses an existing echocardiogram. Physicians analyze specific key measures in echocardiogram data, minimizing the number of in-person visits needed to diagnose pulmonary hypertension, according to Temple University.

The advance comes as physicians and patients alike work to minimize in-person visits to prevent the spread of the novel coronavirus. For pulmonary hypertension patients, access to a virtual screening tool is especially important, as they face elevated risk for hospitalization and death from COVID-19, according to the American College of Cardiology.

The new screening method is called the virtual echocardiography screening tool, or VEST. According to Anjali Vaidya, M.D., codirector of Temple University Pulmonary Hypertension Program, VEST allows physicians to quickly evaluate patients for pulmonary hypertension with non-invasive echocardiogram images.

Since the screening method is entirely virtual, vulnerable patients can continue to socially distance and avoid the risks associated with in-person clinic visits. According to Vaidya, VEST makes it easier to recognize pulmonary hypertension early, which gives patients more time to access further evaluation and treatment.

Critically, VEST is effective at distinguishing between the two most common subtypes of pulmonary hypertension pulmonary arterial hypertension (PAH) and pulmonary hypertension due to left heart disease. Patients with PAH in particular face poor outcomes, which are exacerbated by frequently delayed diagnoses and treatment, according to Temple University.

Pulmonary hypertension is a type of high blood pressure that affects arteries in the lungs and the right side of the heart. For some pulmonary hypertension sufferers, including pulmonary arterial hypertension patients, the condition worsens over time and can become life-threatening, according to the Mayo Clinic.

Mended Hearts Chapter 9 is pleased to share this presentation of Hartford Hospital's being selected as the Mended Hearts Northeast Regional Hospital of the year award. Jason Sutherland and David Haley accepted this honor on behalf of Cardiac Rehab-very fitting since recently it was Allied Health Week-and the hospital wanted to promote their Exercise Physiologists!

Cardiac Rehab is very grateful for the professionalism and dedication that their team of RN's and Cardiovascular Exercise Physiologists provide on a daily basis to our heart patients!

A Sincere Congratulations for Your Outstanding Service!

American Diabetes Month: Researchers Work to Improve Current Diabetes Treatment Options

Diabetes is one of the world's most common chronic diseases, affecting about 463 million adults worldwide number that is expected to increase to 700 million by 2045, according to the International Diabetes Federation.

About 90 percent of these cases are type 2 diabetes, according to Nature Reviews Endocrinology. Patients with type 2 diabetes are resistant to the effects of insulin, a hormone that regulates blood sugar, or do not produce enough insulin to maintain normal blood sugar levels, according to the Mayo Clinic. Patients who are unable to regulate their blood sugar with diet and exercise alone are usually prescribed metformin, which lowers blood sugar.

American Diabetes Month (cont'd)

However, about 30 percent of patients with type 2 diabetes do not respond to metformin and are vulnerable to other complications while their blood sugar remains elevated, according to Science Daily. Between 20 and 30 percent of patients experience side effects that are difficult or impossible to tolerate, according to Genome Web.

Swedish researchers have identified biomarkers that can show in advance, via a simple blood test, how a patient will respond to metformin, according to Science Daily. The researchers hope that this research can be further developed to help inform prescribing decisions for health care providers so patients can receive appropriate medications immediately, according to Science Translational Medicine, a publication of the American Association for the Advancement of Science.

Further research is needed before a blood test goes into wider use for diabetic and pre-diabetic patients, however. The next step for the researchers: A larger clinical study with 1,000 patients from around the world, according to Science Daily.

World of Support Update

As reported in the October 2020 Newsletter, "World of Support" is an awareness campaign and a Virtual Walk. A virtual walk is a walk where you get to pick a distance goal and you are on your honor to complete the distance any way and anywhere you would like between September 29 (World Heart Day) and October 29. This creative event helps create a "World of Support" in a world that needs support now more than ever!

We are very happy to report that our very own Bob Hoffman, (MH Chapter 9 Secretary, and MH National Assistant Regional Director/Executive Vice-President) was successful in raising \$2,492 from 28 Donors, 8 of whom were from Chapter 9. As a result of his efforts, Chapter 9 will receive a check for just over \$1200. Our sincerest Thanks are extended to Bob for his outstanding efforts
